

How to get proof of concept (POC) for a use-case

How to initiate the Process?

Please follow the steps below to initiate the process of getting **POC** for your use-case:

1. Install **Q-assign** from **AppExchange**. Please find the complete instructions about the installation here: [Q-assign Installation Process](#). For POC, we recommend installing the app in Sandbox so that it can be configured and tested before moving the configurations to Production.
2. **Grant Login Access** to Ortoo Support Team following the instructions here: [Granting Login Access](#).
3. Contact Ortoo Support at support@ortooapps.com.

What to expect from us?

1. Once contacted, Ortoo support will take it from there. They will get back to you to get use-case details. Details could be shared over email or a meeting could be set (as you like) and then configure Q-assign for you right from start to end.
2. The support team can also help with testing the configuration. Once everything is tested to be working as expected, they will also move configuration from Sandbox to Production.

Data Protection:

We respect the data integrity of our clients and are under NDA (Non-Disclosure Agreement) as part of our EULA (End User License Agreement) that the trial is supplied under. If required, we can also sign a separate NDA.
